

CND3000/TG The ultimate solution for fluid control

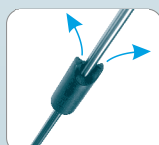

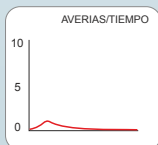

Avoid mechanical failure | Anti-lock float

1

Traditional Systems: The accumulation of metal residue due to gas dirt inside the tanks is the most important factor of malfunction of this equipment. **This determines an exponential curve that increases malfunction as a result of time.**

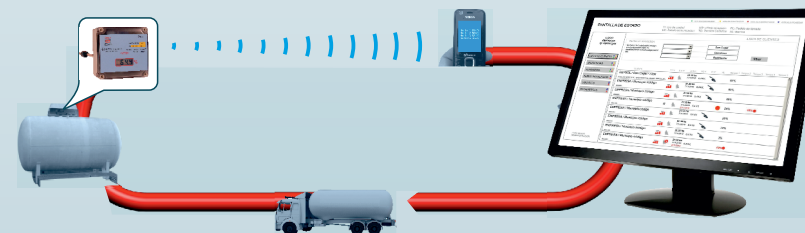

CND3000: Cabeco has patented the first float that sweeps gas dirt away. The anti-lock float prevents the accumulation of deposits thanks to the design of its self-cleaning head. **Malfunction is reduced to a minimum** after the installation period.

Two devices in one | Integrated telemetry

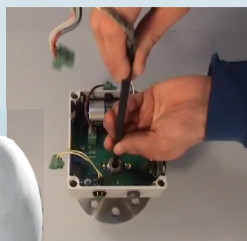

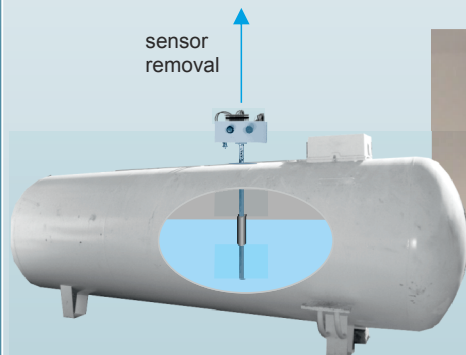

3

Enjoy the benefits of a single device resulting in a clean, cable-free installation. Our telemetry system can be fully configured by SMS.

Avoid emptying the tank | Intelligent Maintenance

2

Our devices have been designed to allow external maintenance, thus avoiding the high costs incurred by emptying the tank. The design of the circuit integrating the sensors allows replacement with no need to access the inside of the tank.

Incredible Features | Extreme Functionality

4

A premium service for your most demanding customers

Ideal for bulk tanks

ATEX Certification

Total compatibility

Precision 2%

Cathodic Protection Measurement
